The present reply constitutes an integral part of the Call.

**Question 1**

*".....Checking the terms and requirements, we have a technical question about the following option requested:*

*"The Gondola lashing Cages should be equipped with a certified **"Fall Protection Lifeline System"** along the two cabins and should also be equipped with two (2) anchor points, per cabin, placed behind the working position, for fall protection."*

*We don't recommend to install "the lifeline system" inside the cabins, due to the small dimension inside, but mainly the lifeline will block the access to the upper part to fix the safety hooks to the main spreader.  
?...."*

**Answer 1**

The proposal of instead of having a *"Fall Protection Lifeline System"* inside of each cabin, having two shackles installed on each of the cabins to secure the harnesses of the dockworkers, is acceptable.

**Important note:** The shackles must comply with the relevant regulations of EU-Greece.
